Aim of the Experiment

Using TCP/IP sockets, write a client-server program to make client sending the file name and the server to send back the contents of the requested file if present.

Code

Server:

```
from socket import * serverName = '' serverPort =
12530 serverSocket =
socket(AF_INET,SOCK_STREAM)
serverSocket.bind((serverName,serverPort))
serverSocket.listen(1) print("The server is ready to
receive") while 1:
 connectionSocket, addr = serverSocket.accept()
sentence = connectionSocket.recv(1024).decode() try:
 file = open(sentence,"r") l =
file.read(1024)
connectionSocket.send(l.encode())
file.close() except Exception as e:
 message = "No such file exist"
connectionSocket.send(message.encode()) connectionSocket.close()
```

Client:

```
from socket import *
serverName = '192.168.1.104'
serverPort = 12530
clientSocket = socket(AF_INET, SOCK_STREAM)
```

clientSocket.connect((serverName,serverPort))

sentence = input("Enter file name")

clientSocket.send(sentence.encode()) filecontents =

clientSocket.recv(1024).decode() print ('From

Server:', filecontents) clientSocket.close()

Output

```
